GETTING STARTED WITH LaTeX AND VIM

JACKSON VAN DYKE

This guide is written primarily for a mac, though most of what is written here would work fine for any Unix machine.

snippets (ultisnips) link

1. DISPLAYING THE PDF

In my opinion there are only two effective options for live updating PDF viewers on a mac.

1.1. **Using Skim.** To install Skim enter the following into the command line:

```
$ brew cask install skim
```

1.2. **Using Zathura.** To tap, install, and link Zathura/the required plugins enter the following into the command line:

```
$ brew tap zegervdv/zathura
$ brew install zathura --with-synctex
$ brew install zathura-pdf-poppler
$ brew install xdotool
$ mkdir -p $(brew --prefix zathura)/lib/zathura
$ ln -s $(brew --prefix zathura-pdf-poppler)/libpdf-poppler.dylib
        $(brew --prefix zathura)/lib/zathura/libpdf-poppler.dylib
```
